# ROCKWOOL® isolering

Product

Valid to

AS ROCKWOOL

Manufacturer

## **General information**

**ROCKWOOL®** isolering

Product

Program holder:

The Norwegian EPD Foundation Post Box 5250 Majorstuen, 0303 Oslo

Phone: +4723088000 e-mail: post@epd-norge.no

**Declaration number:** 

00131E rev1

This declaration is based on Product Category Rules:

CEN Standard EN 15804 serve as core PCR
Product Group Insulation materials, NPCR 012rev.

Declared unit:

1  $\text{m}^2$  of 37mm thick stone wool insulation product with a density of 29 kg/m<sup>3</sup> and a thermal resistance of R=1  $\text{m}^2$  K/W.

**Declared unit with option:** 

Functional unit:

The environmental product declaration has been worked out by:

Rasmus Nielsen and Anders Schmidt, Ph.D., FORCE Technology, Lyngby, Danmark

internally

Verification:

Independent verification of data and other environmental information has been carried out in accordance with ISO14025, 8.1.3.

externally

Dragidant Joan Majiar

President Joep Meijer (Independent verifier approved by EPD Norway)

**AS ROCKWOOL**

<sup>\*</sup> The product contains no substanses from the REACH Candidate list or the Norwegian priority list

## **Product**

## **Product description:**

Stone wool insulation from ROCKWOOL is a firesafe\* material for insulation against heat, cold, fire, vibrations and noise. The product is wrapped with PE-foil and placed on wooden pallets for further distribution.

Stone wool insulation from ROCKWOOL for the Scandinavian market is supplied by two production sites in Norway (Moss and Trondheim) as well as two sites in Denmark (Doense and Vamdrup), each with two lines. The properties of the ROCKWOOL products from the different production sites are identical. The reference flow is a weighted average and is calculated using the following distribution of production capacity (2011) on the four production sites: Vamdrup 30,6%, Doense 35,7%, Trondheim 11,9%, Moss 21,7%.

\* A1 when tested according to EN 13501-1 (Euroclasses)

#### Description of manufacturing processes:

The furnace used in all four production sites is an oven with coke as the main energy source. The virgin stone raw materials used at all sites are mainly basalt, diabase and dolomite. The Danish sites also use various secondary materials, including internal wool waste, which is mixed with cement into briquettes. The mineral raw materials are melted and spun into fibers at a temperature of about 1500°C. A synthetic binder and a water-repellant agent are added, whereafter the final curing (polymerisation) and forming takes place at a temperature of about 230°C. Finally the product is cut into the desired dimensions and packed in PE foil.

#### Technical data:

Scaling factors for ROCKWOOL Insulation materials in this EPD can be seen in the table below. The scaling factors show how much to multiply the environmental burdens by in order to obtain a thermal resistance of R=1 m² K/W with other ROCKWOOL products. The R-values used for scaling gives a very good indication of the amount of materials needed to achieve the desired insulation effect of other product types, but is not an exact measure. Stone wool insulation products marked with an asterix (\*) in the table are sold with extra features for special applications e.g. with wire netting, a bitumen membrane or aluminium foil. The extra features are not covered by this LCA.

The products covered by the EPD are produced at all production lines in a full year. The variation between production lines has not been determined.

#### Market:

Scandinavia

<sup>\*:</sup> Products marked with an \* are specialty products with extra features like wire netting and aluminium foil. The extra features are not included in the EPD-calculations

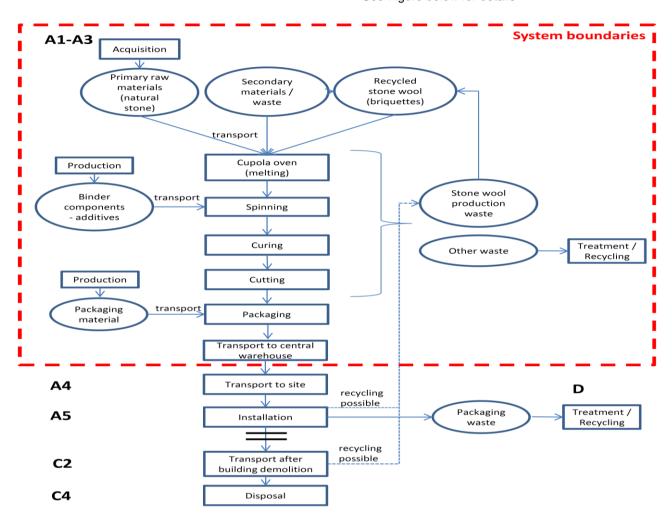

## LCA: Calculation rules

#### Declared unit:

1  $\text{m}^2$  of 37 mm thick stone wool insulation product with a density of 29 kg/m<sup>3</sup> and a thermal resistance of R=1  $\text{m}^2$  K/W.

### System boundary:

The overall system boundaries include extraction and transportation of raw materials as well as all manufacturing processes (cradle-to-gate). Transport from all factories to a central storage in Norway has been included. See Figure below for details

## Data quality:

High quality data from GaBi 6 and ecoinvent have been used for acquisition of raw materials and transportation. Legally required information has been used for manufacturing processes at ROCKWOOL. The age of the oldest dataset in the database is 13 years and the vast majority of datasets are under 5 years old. The data collected from the sites are from 2011. Accordingly, the overall quality is judged to be good to very good.

#### **Cut-off criteria:**

All inputs of raw materials and energy have been included. Please note that products with special features e.g. wirenetting, bitumen membrane or alufoil are not included in the EPD. Please consult ROCKWOOL AS for more information.

#### Allocation:

Allocation has been made according to the provisions in EN 15804. Impacts from recycled material have been allocated to the primary product, except transportation. ROCKWOOL supply district heating in Denmark. Respectively 7,3% and 9,4% of the energy consumed in the two production sites in Denmark have been allocated to district heating, using the energy content as the allocation key. The emissions associated with energy production have been allocated in the same way. A sensitivity analysis of the results using a different allocation key, such as the economic value, or substitution approach has not been performed.

NEPD 00131E rev1 Rockwool.xlsm 4/8

## LCA: Scenarios and additional technical information

The following information describe the scenaries in the different modules of the EPD.

Transport from production site to sentral warehouse in Norway

Туре	Capacity utilisation	Gross density of	Type of	Distance km	Fuel/Energy	Value
		products	vehicle	Distance kin	consumption	(l/t)
Truck*	30		****	127	1,7*10 <sup>-2</sup> l/tkm	2,16
Truck**	30		****	50	1,7*10 <sup>-2</sup> l/tkm	0,860
Boat***	48		****	149	4,6*10 <sup>-3</sup> l/tkm	0,685

- \* Transport byTruck (weighted average). From Danish production sites to Moss in Norway
- \*\* Transport by Truck. From Moss and Trondheim to central warehouse in Norway
- \*\*\* Transport by Boat (weighted average). From Denmark to Norway (Frederikshavn terminal to Oslo)
- \*\*\*\* Dataset from GaBi with a Euroclass 3 truck-trailer with a payload of 22 tons.
- Dataset from GaBi with a Bulk commodity carrier with 1,500-20,000 dwt. payload capacity and light fuel oil driven.

**Additional information:** Transport from production site to central warehouse in Norway 326 km

# **Specific Norwegian requirements**

## Electricity

Electricity used in the manufacturing processes has been accounted for using the process Danish Electricity grid mix (1kV-60kV) from GaBi6 (reference year 2009).

Electricity mix 0,139 kg CO<sub>2</sub> eqv/MJ

and the process Norwegian Electricity grid mix (1kV-60kV) from GaBi6 (reference year 2009).

Electricity mix 0,011 kg CO<sub>2</sub> eqv/MJ

#### **Dangerous substances**

None of the following substances have been added to the product: Substances on the REACH Candidate list of substances of very high concern (of 25.10.2013) substances on the Norwegian Priority list (pr.25.10.2013) and substances that lead to the product being classified as hazardous waste. The chemical content of the product complies with regulatory levels as given in the Norwegian Product Regulations.

## **Transport**

Transport from production site to central warehouse in Norway is 326 km

NEPD 00131E rev1 Rockwool.xlsm 6/8

#### Indoor environment

In general, ROCKWOOL products have been assessed using the Finnish M1 emission classes for building material. In total 32 specific ROCKWOOL products have been tested representing a wide range of products. To be granted the M1 quality label, an emission test (incl. ammonia, formaldehyde, and carcinogens) and an odour test has to be performed. The time period of testing is 28 days. Criteria: TVOC (Minimum of 70% of the compounds shall be identified): <0,2 mg/m2h, Formaldehyde (HCOH): < 0,05 mg/m2h, Ammonia (NH3): <0,03 mg/m2h, Carcinogenic compounds (belonging to category 1 of IARC monographs): <0,005 m,/m2h, Odour (dissatisfaction with odour shall be below 15%): No Odour. The M1 is the highest achievable best rank in the classification system.

(https://www.rakennustieto.fi/index/english/emissionclassificationofbuildingmaterials.html)

#### **Carbon footprint**

Carbon footprint has not been worked out for the product.
