

REACH (EU REGULATION NO.1907/2006), IMPLEMENTATION AT ARMACELL

Most of the products sold by Armacell do fall under the definition of products as per Article 3(3) of the REACH regulation. Adhesive and cleaner and few other products are considered as being preparations according to article 3(2). Since our products do not emit nor release substances if used as intended, they have not to be registered at the European Agency for chemical substances.

This is different for substances used to manufacture our products. All substances used by us have been preregistered by us or by our suppliers.

Substances with the time line December 1st, 2010 have been registered. Armacell takes care that all other substances will be registered in due time.

Of course it is ensured within our purchasing process that in case of new and further developments we only use substances pre-registered according to REACH.

None of our products contains substances, mentioned in the Candidate List of Substances of Very High Concern for authorization in concentrations of more than 0.1 % (last update 08.07.2021).

Safety data sheets for products with hazardous properties have been adjusted to REACH regulations. You can find the actual safety data sheets under www.armacell.com.
